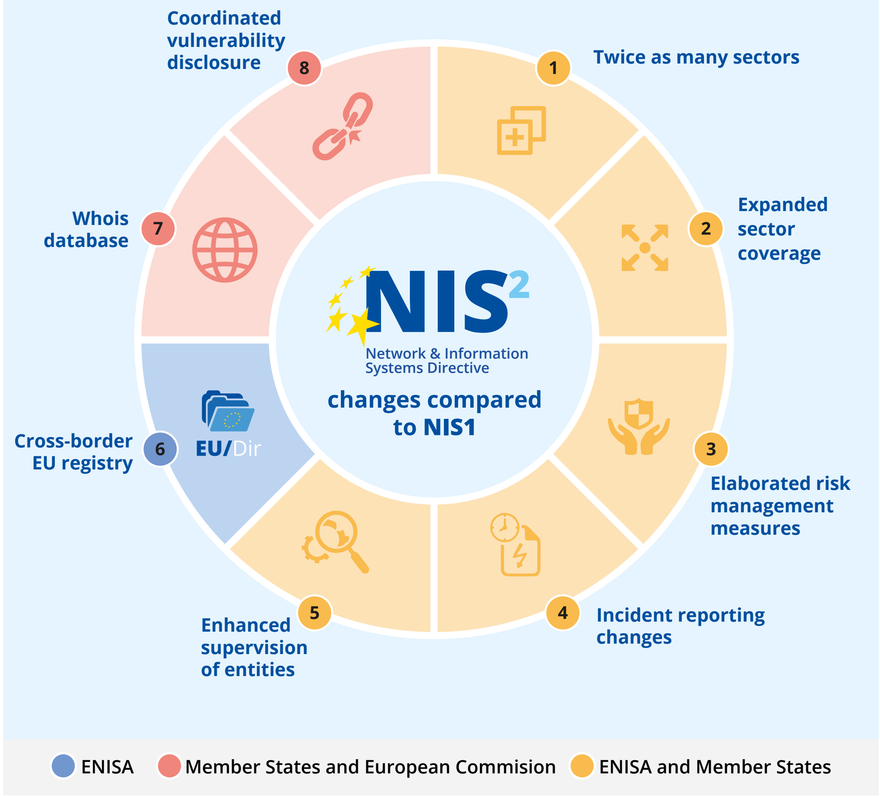
NIS2 Network & Information Systems Directive

FROM NIS1 TO NIS2: WHAT'S NEW



ENISA · Member States and European Commision · ENISA and Member States

1 Twice as many sectors

With NIS2 more sectors / subsectors are in scope based on their degree of digitalization, interconnectedness and how crucial they are for the economy and society.

2 Expanded sector coverage

A size threshold rule distinguishes essential from important entities, while Member States can include smaller, high-risk entities.

3 Elaborated risk management measures

An expanded list of proportional, all-hazards cybersecurity risk management measures is introduced, along with increased responsibilities for top management.

4 Incident reporting changes

More structured incident notification obligations apply to in-scope organisations, with specific deadlines for incidents which have a 'significant impact' on the provision of their services.

5 Supervision of entities

A more coherent framework for stronger supervision is introduced, that encompasses minimum supervisory means, distinct regimes for essential and important entities, and cross-border collaboration mechanisms.

6 Cross-border EU Registry

EU/Dir

An EU-wide registry for cross-border entities where Member States will register their main establishments and branches is foreseen for enhanced supervision.

7 Whois database

Member States are expected to maintain a dedicated database of domain name registration data, including contact details for registrants and administrators, to enhance DNS security, stability, and resilience.

8 Coordinated vulnerability disclosure

A structured process for reporting vulnerabilities to manufacturers or service providers, is introduced, to ensure vulnerabilities are addressed and resolved before being made public.
